

Bibliography of Publications related to  
Classical and Quantum Gravity  
in terms of the Ashtekar Variables

**Abstract**

This bibliography attempts to give a comprehensive overview of all the literature related to the Ashtekar variables. The original version was compiled by Peter Hübner in 1989, and it has been subsequently updated by Gabriela Gonzalez and Bernd Brügmann. Information about additional literature, new preprints, and especially corrections are always welcome.

## Pointers

Given the number of references that follow, let me point out to the non-specialist some of the references that can serve as entry points into the literature.

First of all, for a complete and authoritative presentation of canonical gravity in the Ashtekar variables there is of course Ashtekar's latest book [4] which appeared in 1991. The most recent general introduction to the new variables by Ashtekar are his Les Houches lectures of 1992 [301].

Rather complete reviews of canonical gravity in the Ashtekar variables can be found in Rovelli [171] and Kodama [323]. For a recent status report see Smolin [346]. For a critical appraisal of canonical quantum gravity see Kuchař [325]. An overview over different approaches to quantum gravity is given in Isham [159].

Finally let me mention a few more specialized references. A clear and detailed exposition of connection dynamics is given by Romano in [8,342]. For newer developments related to matter couplings (geometric approach) see Peldán [339]. The definition of the loop representation is discussed in Brüggmann [11]. Pullin [340] gives an introduction to results obtained via the loop representation in (unreduced) quantum gravity.

## Books and Dissertations

1. Abhay Ashtekar and invited contributors. *New Perspectives in Canonical Gravity*. Lecture Notes. Napoli, Italy: Bibliopolis, February 1988. [Errata published as Syracuse University preprint by Joseph D. Romano and Ranjeet S. Tate.]
2. V. Husain. *Investigations on the canonical quantization of gravity*. Ph.D. Thesis, Yale University (1988).
3. Paul. A. Renteln. *Non-perturbative approaches to Quantum Gravity*. Ph.D. Thesis, Harvard University (1988).
4. Abhay Ashtekar. *Lectures on non-perturbative canonical gravity*. (Notes prepared in collaboration with R. Tate). Advanced Series in Astrophysics and Cosmology-Vol. 6. Singapore: World Scientific, 1991.
5. R. Capovilla. *The self-dual spin connection as the fundamental gravitational variable*. Ph.D. Thesis, University of Maryland (1991).
6. S. Koshti. *Applications of the Ashtekar variables in Classical Relativity*. Ph. D. Thesis, University of Poona (June 1991).
7. D. Rayner. *New variables in canonical quantisation and quantum gravity*. Ph.D. Thesis, University of London (1991).
8. J. D. Romano. *Geometrodynamics vs. Connection Dynamics (in the context of  $(2+1)$ - and  $(3+1)$ -gravity)*. Ph.D. Thesis, Syracuse University (1991), see also gr-qc/9303032
9. C. Soo. *Classical and quantum gravity with Ashtekar variables*. Ph.D. Thesis, Virginia Polytechnic Institute and State University. VPI-IHEP-92-11 (July 1992)
10. R.S. Tate. *An algebraic approach to the quantization of constrained systems: finite dimensional examples*. Ph.D. Thesis, Syracuse University (Aug. 1992), gr-qc/9304043
11. B. Brüggmann. *On the constraints of quantum general relativity in the loop representation*. Ph.D. Thesis, Syracuse University (May 1993)
